Spatial Data Management

How does it work?

The Google mapping service [TM] provides an amazing resource of maps and aerial imagery. We use our own London-based servers to provide a system that combines your information with the Google data. Any related text and photo information you have is held in a spatial database that runs alongside the mapping, enabling users to interrogate and interact with text, maps and images.

If you want to update your data you can send the new files to us, or take an option to upload them yourself.

The Google mapping service [TM] is freely available for use on public websites for non commercial purposes. A chargeable licence is required for other circumstances.

What does it cost?

Set up costs £1,950 - this is a one - off cost
- Discuss your requirements and confirm specification
- Prepare your map, text and photo data (up to one day)
- Create a dedicated site on our London servers and upload data
- Create web page to match corporate style
- Set up search gazetteer, line styles, etc
- Test and publish

Licensing and hosting costs £1,650 for the core system - this is an annual cost
- Annual software licenses
- Provide hardware and hosting services
- Maintain system

Prices include 20% discount for orders received prior to October 2008
Prices excludes VAT
